

# VIRTUAL PRIVATE NETWORKING SSL VPN & IPSEC VPN

## UTM / FIREWALL / VPN / WIRELESS

SonicWALL's virtual private networking (VPN) technology lets you establish a secure and extensive VPN that is easy to manage and administer. For secure site-to-site communication, SonicWALL's network security appliances utilize IPsec VPN. For remote client-to-host secure access, SonicWALL offers both SSL VPN and IPsec VPN connectivity options. For SSL VPN, [SonicWALL NetExtender](#) allows for clientless remote access for Windows, Mac and Linux-based systems utilizing a web-portal to provide connectivity and access. For IPsec VPN, SonicWALL Global VPN Client enables the client system to download the VPN client for a more traditional client-based VPN experience. SonicWALL also makes a complete line of SSL VPN appliances which offer remote access and management capabilities which organizations may need depending on their size, network complexity or overall security needs.

### CLEAN VPN TECHNOLOGY

Creating a VPN with SonicWALL technology is easy, efficient and safe. SonicWALL® [Clean VPN™](#) technology addresses the special security needs of the VPN, keeping out attacks that target VPNs while letting your employees in. [Clean VPN](#) decontaminates all mobile and branch office connections to prevent vulnerabilities and malicious code from being introduced from remote connections into the corporate network. The technology scans remote traffic streams for threats, so that any harmful traffic is addressed before it even reaches the network. [Clean VPN](#) can send you an alert as soon as threats are identified, so that all potential attacks can be immediately isolated and contained.

### SONICWALL SSL VPN INTEGRATION

For the greatest support of your [E-Class SSL VPNs](#), you can easily integrate your SonicWALL [E-Class NSA](#) appliances with our SonicWALL [E-Class SSL VPN](#) appliances. When the [E-Class SSL VPN](#) appliance runs with an [E-Class NSA](#) appliance, you gain the extra advantage of enhanced security, and access to SonicWALL's [gateway anti-virus, anti-spyware and content protection](#) services helping control and protect the enterprise network.

### SSL VPN AND IPSEC VPN CLIENTS

SonicWALL virtual private networking (VPN) technology lets you establish a secure and extensive enterprise VPN that is easy-to-manage and administer. Using either the [SonicWALL NetExtender for SSL VPN clients](#) or the SonicWALL Global VPN Client for IPsec-based clients you get gateway enforcement, central management and configuration flexibility to deliver comprehensive desktop security to mobile workers and corporate networks
